

Amendments To The Claims:

Please cancel claims 7 and 15.

1. (Currently Amended) A dilatation balloon comprising fibers and a matrix material, said fibers embedded in the matrix material of the balloon, said fibers are non-elastomeric.
2. (Original) The dilatation balloon of claim 1 wherein said fibers are reinforcement fibers.
3. (Original) The dilatation balloon of claim 1 wherein said fibers are expansion control fibers.
4. (Canceled)
5. (Original) The dilatation balloon of claim 4 wherein said fibers are embedded in the matrix material of the balloon in a helical pattern.
6. (Original) The dilatation balloon of claim 1 wherein said fibers are thermoplastic.
7. (Canceled)
8. (Original) The dilatation balloon of claim 6 wherein said fibers are selected from the group consisting of polyethylene, polyethylene terephthalate and mixtures thereof.
9. (Original) The dilatation balloon of claim 1 wherein said matrix material is thermoplastic.
10. (Original) The dilatation balloon of claim 9 wherein said matrix material comprises an elastomer.
11. (Original) The dilatation balloon of claim 1 wherein said matrix material comprises polyurethane.
12. (Previously Presented) The dilatation balloon of claim 1 where said matrix material comprises a non-elastomeric material.
13. (Original) The dilatation balloon of claim 1 further in combination with a catheter assembly, a stent or a combination thereof.

14. (Currently Amended) A catheter system for introducing and implanting a stent member in a body comprising a catheter member having first and second ends, said first end having an inflatable portion comprising a matrix material and fibers embedded in the matrix material, a lumen in fluid communication with said inflatable portion and said second end to provide means for inflating said inflatable portion, said catheter system further comprising an intravascular stent mounted on said inflatable portion.

15. (Canceled)

16. (Original) The catheter system of claim 14 wherein said fibers are reinforcement fibers.

17. (Original) The catheter system of claim 14 wherein said fibers are expansion control fibers.

18. (Canceled)

19. (Previously Presented) The catheter system of claim 14 wherein said fibers are embedded in the matrix material of the inflatable portion in a helical pattern.

20. (Original) The catheter system of claim 14 wherein said fibers are thermoplastic.

21. (Original) The catheter system of claim 20 wherein said fibers are non-elastomeric.

22. (Original) The catheter system of claim 14 wherein said fibers are selected from the group consisting of polyethylene, polyethylene terephthalate and mixtures thereof.

23. (Original) The catheter system of claim 14 wherein said inflatable portion is formed from a thermoplastic elastomer.

24. (Original) The catheter system of claim 14 wherein said inflatable portion is formed from polyurethane.

25. (Original) The catheter system of claim 14 wherein said inflatable portion is formed of a non-elastomeric material enclosed within an elastomeric material.

26. (Original) The catheter system of claim 14 further comprising an expandable stent member

capable of permanent deformation when expanded.

27. (Previously Presented) The catheter system of claim 15 wherein at least a portion of said stent member is releasably attached to said inflatable portion by a bond.
